#### (PCC) CH1011: Advanced Momentum and Heat Transfer

**Examination Scheme** 

**Teaching Scheme** 

Lectures	03Hrs/Week	ISE	40 Marks
Tutorials	01	ESE	60 Marks
Total Credits	04	TW	25 Marks
		Duration of ESE	•

#### Course Objectives (CO):

1: Introduce analogy between momentum and heat transfer

2: Explain general conservation equations for transport phenomena

3: Develop momentum balance for a given system at macroscopic and microscopic scale.

4: Analysis of governing equations to obtain velocity profiles

5 :Assist students in developing ability to make engineering judgments ,including judgements regarding process safety.

6. Discuss applications in various heat transfer equipment in process industries ,Heat Transfer Augmentation & Pinch Technology

	Course Contents	Hours
Unit 1	<b>Boundary Layer Flow:</b> Boundary layer equations, separation of BL, Blasius solution for flat state, properties of BL equation, Momentum integral equations.	(04)
Unit 2	Turbulent Flow: Reynolds equation for turbulent flow, velocity distribution for flowin pipe. Statistical theory of turbulence. Drag reduction etc.Non-Newtonian Fluids: Rheological behavior of non-Newtonian fluids, laminar flowin cylindrical tubes, laminar flow between parallel plates, laminar flow in annuli.Generalized relationship for power law model	(04)
Unit 3	Agitation And Mixing: Velocities in stirred tanks. Flow patterns in stirred tanks, Power consumptions in stirred vessels, mixing equipments.Multiphase Flow: Two phase gas vapor liquid flow, horizontal and vertical flow of gas-liquids, liquids, gas-solid mixtures, slip and hold up effect, phase separation and settling behavior, analysis of stratified and bubble flow, formation of bubbles and drops and their size distribution and hold up in different flow system, momentum and energyrelations.Motion In The Fluidized Bed: Bubbling fluidization, semi-fluidization, mixing and	(06)
	segregation in fluidized bed, Numerical and application of fluidization.	(05)

	Introduction: Review of heat Transfer, transient heat conduction; Lumped system analysis, heat transfer analogies. Turbulent Forced Convective Heat Transfer: Momentum and energy equations -			
Unit 4	turbulent boundary layer heat transfer – mixing length concept - turbulence model, Heat pipe.	(04)		
Unit 5	<ul> <li>Heat Transfer In Two Phase Systems: Heat transfer regimes and flow maps.</li> <li>Condensation: Basic process, on planner surface, inside and over pipe of pure and multicomponent vapors. Heat transfer in paced bed and fluidized beds. Overall pressure drop and void calculation methods. Flow regimes in two phase flow. Drift flux model, annular flow, critical flow, flow instabilities, homogeneous flow, and separated flow.</li> <li>Non-Newtonian Flow Heat Transfer: Comparative study of Newtonian and non-</li> </ul>	(05)		
	Newtonian fluid in context with heat transfer, Newtonian and non-Newtonian heat transfer in circular tube, coils and other configuration, Non-Newtonian heat transfer in PFR, CSTR. Generalized relationship of power law fluid, forced convection heat transfer to Bingham plastic and power law fluid in circular conduits.	(04)		
Unit 6	<b>Heat Transfer Augmentation:</b> Active and passive techniques, rough surface, swirl flow generation and compound augmentation. Compact heat exchangers. Introduction of Pinch Analysis and Process integration.	(05)		
	ments: Each student will submit minimum 6 assignments based on the different topics in c rea of advanced momentum and heat transfer ; keeping track of the recent technological tr			
	e Outcomes (CO): At the end of course students will	<b>*</b>		
1: Able	e to understand the chemical and physical transport processes and their mechanism			
2: Able	e to do heat, mass and momentum transfer analysis			
3: Able	e to analyze industrial problems along with appropriate approximations and boundary cond	itions		
4: Able	to develop steady and time dependent solutions along with their limitations			
5: Und	erstand the concepts of boundary layer and its estimation in different flows			
6: Und	erstanding of various types of heat transfer process and devices

Course	Obje	ctives (CO):	· · · ·	
	1.	Define & describe the basic law	vs of thermodynamic	
	2.	Explain the criteria for equilibr	ium with stability of thermodynamic system.	
	3.	Develop skills to make appropr	iate assumptions and ability to predict intermolecular potential	and
		excess property behavior of mu	lti- component systems.	
	4.	Analysis & estimation of the G	ibbs free energy and fugacity of a component in mixture	
	5.	Judge the Chemical equilibrium	n and evaluate the degrees of freedom for chemically reacting s	ystems
	6.	Discuss statistical thermodynan	nic terms.	
			Course Contents	Hours
	Detai	led review of thermodynam	nics laws and basic concepts: Laws of thermodynamics,	
Unit 1	Concepts of entropy, Intensive and extensive variables, Enthalpy, Gibbs free energy,			(08)
	Equat	ions of state, other important	thermodynamic properties.	
	Equilibrium and Stability in one component systems: The criteria for equilibrium,			
	Stability of thermodynamic system, The molar Gibbs free energy and fugacity of a pure			
Unit 2	component. The Gibbs phase rule for one component system. Thermodynamic properties of			(08)
	phase	transitions Problems.		

	The Thermodynamic of Multi Component Mixtures: The thermodynamic description of				
	mixtures. The partial molar gibbs free energy and the generalized Gibbs – Duhem equation.				
Unit 3		(08)			
	Thermodynamic state for a multicomponent multiphase system. The Gibbs phase rule				
	Problems (Non Reactive).				
	The estimation of the Gibbs free energy and fugacity of a component in mixture: The				
	ideal gas mixture, The partial molar mixture properties. The fugacity of a species in gaseous,				
Unit	<b>1</b> liquid and solid mixtures. Several correlative liquid mixtures (activity coefficient) models	(08)			
	Problems. UNIFAC method, UNIQUAC equation, Vapor liquid equilibrium using activity				
	coefficient models, problems.				
	Chemical Reaction equilibrium: Chemical equilibrium in a single phase system,				
<b>TT</b> • 4	Heterogeneous chemical reactions, Chemical equilibrium when several reactions occur in	(08)			
Unit	single phase, Phase rule and Duhem's theorem for reacting systems, Degree of freedom				
	analysis for non reacting and reacting systems				
	<b>Introduction to Statistical thermodynamics :</b> Quantum considerations, Microstates,				
Unit	Macrostates and thermodynamic probability, Physical models, Boltzmann statistics, Fermi-	(08)			
	Dirac statistics and Bose – Einstein statistics, Partition function, Phase space,				
Assig	nments: Each student will submit minimum 6 assignments based on the different topics in consultation with	n faculty,			
in the	area of thermodynamics of phase equilibria & chemical equilibria keeping track of the recent technologic	al trends			
and d	evelopments.				
	se Outcomes (CO): At the end of course students should be able to				
	1.Formulate and manipulate the thermodynamic treatment of arbitrary processes.				
2.Formulate and analyze specific Chemical Engineering problems using fundamental concepts.					
3.Select appropriate approximations for practical problem solving.					
4.Understand the implications of approximations on the efficiency and accuracy of the solution

Lectures	03 Hrs/Week		ISE	40 Marks	
Tutorials			ESE	60 Marks	
Total Credits	03		TW		
			Duration of	ESE .	
Course Obje	ectives (CO):				
1. Introduce f	undamentals of c	reating mathematical models of chemical proces	ss systems.		
2. Generate st	eady and dynam	ic model for different processes.			
3. Solve proce	ess design proble	ms, based on fundamental analysis and using ma	athematica	l models of chemical	
processes.					
4. Implementation on mathematical tools to analyze the system both to gain insight and make predictions.					
5. Explain verification/ validation of simulation model through the simulators.					
		Course Contents		Hours	

Unit 1	<ul> <li>Introduction to dynamic models: Mass balance equation - Balancing procedure, Case studies: CSTR, Tubular reactor, Coffee percolator, Total mass balance - Case Studies: Tank drainage, Component balances - Case Studies: Waste holding tank, Energy balance- Parallel reaction in a semi continuous reactor with large temperature difference, Momentum balances - CSTR, Gas liquid mass transfer in a continuous reactor.</li> <li>Modeling of stage wise processes: Reactor Configurations, Generalized model description, Heat transfer to and from reactors, Steam heating in jacket, Dynamics of the metal jacket walls.</li> </ul>	(06)
Unit 2	<ul> <li>Mass transfer models: liquid-liquid extraction, distillation, Multicomponent separation, multi component steam distillation, absorber- stage wise absorption, steady state gas absorption with heat effects, evaporator.</li> <li>Model Discrimination And Parameter Estimation: Rate equations, Batch reactor – Constant volume, Semi - batch reactor, CSTR - Constant volume CSTR, CSTR cascade.</li> </ul>	(06)
Unit 3	<b>Lumped and distributed system:</b> Distributed system- Counter current heat exchanger, Flasher design, Condensation, Definition of lumped parameter model. Mathematical models of heat- transfer equipments: Shell & tube heat exchangers, Evaporators, Fired heaters, Partial condensers. Plug flow reactor, Plug flow reactor contactors, Liquid –liquid extraction column dynamics.	(06)
Unit 4	<b>Flow sheet simulation :</b> Process flow sheet simulation, Process and information matrix, Materials and Energy balance computation using modular approach, Process analysis, Process variables, selection, Equipment selection.	(06)
Unit 5	<b>Dynamic simulation:</b> Dynamic simulation of Reactors, distillation column, Absorbers, evaporators and crystallizes, introduction to simulation packages like GPSS, CSMP.	(06)
Unit 6	<b>Process Simulators:</b> Introduction to professional simulator like UNISIM, Aspen. Mathematical tools like SciLab, Introduction to Solver and Poly Math etc.	(06)
Course	Outcomes (CO): At the end of course students will	
1. de	fine physical problems in terms of mathematical modeling and how it is related.	
	ply the need for modeling, estimate necessary model complexity through modelin	
	cognize how models are developing from rate laws, balances and constitutive equation	ns.
	lve the basis of chemical engineering process and adjustable parameters in them.	
	alyze the mathematical tool to predict the chemical engineering process	
6 cre	eate the small modeling with simulation for any physical chemical engineering problem	m

6. create the small modeling with simulation for any physical chemical engineering problem

	<b><u>Elective-II</u> : Ch-PE-1041 : Nanotechnology</b>				
Teaching Scheme			<b>Examination Sche</b>	me	
Lectures	03 Hrs/Week		ISE	40 Marks	
Tutorials			ESE	60 Marks	
Total Credits	03		TW		
			Duration of ESE		

Cour	se Objectives (CO):			
	Introduce fundamentals of Nanoscience and Nanotechnology.			
2.	Study the concept of nanomaterials.			
3.	Explain the synthesis, purification and application of nanomaterials.			
	Study the advances in nanotechnology			
5.	Intellectual property rights of nanotechnology			
	Course Contents	Hours		
Unit 1	Fundamental concepts (Bottom-up and Top-down processes).	(07)		
Unit 2		(07)		
Unit 3	Nanomaterials: Fundamental concept of nanomaterial, Materials used in nanotechnology, carbon nanotubes-properties	(07)		
Unit 4	Synthesis, Purification, Application of Nanomaterials.	(06)		
Unit 5	Recent Advances in Nanotechnology	(07)		
Unit (	Intellectual property rights on Nanotechnology: Importance of IP Protection, copy rights and trade secrets	(06)		
	se Outcomes (CO): At the end of course students will			
1.7	o understand the application of Nanoscience in catalysis and green chemistry.			
2. Demonstrate the understanding of length scale concepts, nanostructures and nanotechnology.				
3.0	Characterization of nanomaterials.			
4. F	Physico chemical aspects of different types of nanostructures.			
5. Systematically solve scientific problems related specifically to nano-technological materials using conventional scientific and mathematical notation				
6. Identify the principles of processing, and synthesis of nonmaterial's and nanostructures				
Text l	Books / Reference Books

Lectures	03 Hrs/Week		ISE	40 Marks	
Tutorials			ESE	60 Marks	
Total Credits	03		TW		
			Duration of ESE		

Cours	e Objectives (CO):	
	1.To present different concepts of green technologies.	
	2. To acquire principles of Energy efficient technologies	
	3. To gain knowledge of the importance of life cycle assessment	
	4. To learn the importance of green fuels and its impact on environm	ent.
	5 To learn zero pollution control aspect	
	Course Contents	Hours
Unit 1	Introduction to Organic Chemistry /Analytical Chemistry /Basic Chemical Engineering	(04)
Unit 2	Introduction to Green Chemistry: Principles of Green Chemistry, Reasons for Green Chemistry (resource minimisation, waste minimisation, concepts), Green reactions solvent free reactions, Catalyzed (heterogeneous/homogeneous) reactions, MW/ Ultrasound mediated reactions, Bio catalysts etc	(08)
Unit 3	Introduction to Pharmaceutical Process Chemistry: Introduction to process chemistry, the difference between synthesis and process,	(07)
Unit 4	Rote design, Route optimization, DOE	(05)
Unit 5	Role of Analytical Chemistry in Process Chemistry Role of Process Safety in Process Chemistry: TH classification, MSDS, Thermal Hazards, Waste segregation and disposal.	(07)
Unit 6	Scale-up aspects including PE in Process Chemistry: Case Studies; New Initiatives : Micro reactors.	(06)
	e Outcomes (CO): At the end of course students will	
. Unde	erstand the principles of green chemistry and engineering	
. Desi	gn processes those are benign and environmentally viable	
. Desig	n processes and products those are safe and hazard free	
. Lear	n to modify processes and products to make them green safe and economically ble.	
. App	y the principles of green technology to specific industrial processes

Course	Objectives (CO):			
1. Apply	engineering principles to address issues in bio	processes		
2. Analy	ze and identify limiting factors in a bioprocess	and Propose solutions to address		
biologica	l and engineering problems			
3. Explai	n the aerobic and anaerobic fermentation proce	esses		
4. Descri	be applications and solve problems relating to	the use of enzymes for industrial		
bioproces	sing			
5. Deteri	nine and analyze Mass transfer in heterogeneous	ous biochemical reaction systems		
with proc	ess parameter			
6. Impro	ve chemical parameters in bioreactors			
	Course	Contents	Hours	
<b>T</b> T <b>1</b> / <b>4</b>	Review of fundamentals of microbiology and	biochemistry. Bioprocess principles: Kinetics	(06)	
Unit 1	of biomass production. Substrate utilization and product formation.			
	Batch and continuous cultures. Fed batch culture introduction. Fermentation processes.		+	
Unit 2	General requirements of fermentation processe	28.	(06)	

	An overview of aerobic and anaerobic fermentation processes. Examples of simple and complex media. Design and usage of commercial media for industrial fermentation. Thermal	
Unit	death kinetics of microorganisms. Heat sterilizations of liquid media. Filter stabilizations of	(06)
	liquid mediaand air.	
	-	
	Enzyme technology- Microbial metabolism enzymes classification and properties. Applied	
Unit	4 enzyme catalysis-kinetics of enzyme catalytic reaction. Metabolic pathways. Protein synthesis in	(06)
	cells. Bioreactor design and operations. Selection scale up operations of bioreactors.	
	Mass transfer in heterogeneous biochemical reaction systems. Oxygen transfer rates and	
Unit	5 coefficients. Role of aeration and agitation in oxygen transfer. Heat transfer processes in	(06)
	biological systems. Recovery and purification of products.	
	Introduction to instrumentation and process control in bioprocesses. Measurement of physical	
Unit	and chemical parameters in bioreactors. Monitoring and control of dissolved oxygen, pH,	(06)
	Impeller speed and temperature in a stirred fermenter	
Cour	se Outcomes (CO): At the end of course students should be able to	
	1. Understanding of biological basics and bioprocessing	
	2. Understanding the difference between bioprocesses and chemical processes	
	3. Bioprocess design and operation	
	4. Choice of bioreactor	
	5. Heat & mass transfer considerations and scale up of bioprocesses	
	6. Introduction to bioprocess monitoring/control

		Ch - SW - 1071: Seminar – I		
Teaching Sche	Teaching Scheme Examination Scheme		me	
Lectures			ISE	
Tutorials			ESE (Oral)	
Practical	02Hrs/Week		TW	50
Total Credits	01		Duration of ESE	

Course Objectives (CO):
1 To Identify understand and discuss current real-world issues

2. To Distinguish and integrate differing forms of knowledge and academic disciplinary approaches (e.g.,

humanities and sciences) with that of the student's own academic discipline (e.g., in agriculture, architecture, art, business, economics, education,

engineering, natural resources, etc.). And apply a multidisciplinary strategy to addresscurrent, real-world issues.

3. To Improve oral and written communication skills.

4. To Improve presentation skills

Course Contents	Hours
<ul> <li>Seminar-I should be based on the literature survey on any topic relevant to Design Engineering (should be helpful for selecting a probable title of the dissertation). Each student has to prepare a write up of about 25-30 pages of "A4" size sheets and submit it in IEEE format in duplicate as the term work.</li> <li>The student has to deliver a seminar talk in front of the faculty of the department and his classmates. The concerned faculty should assess the students based on the quality of work carried out, preparation and understanding of the candidates. Some marks should be reserved for the attendance of a student in the seminars of other students.</li> </ul>	()

Course Outcomes (CO): At the end of course students will

1. Apply principles of ethical leadership, collaborative engagement, socially responsible behavior, respect for diversity in an interdependent world, and a service-oriented commitment to advance and sustain local and global communities.

2. Learn and integrate. Through independent learning and collaborative study, attain, use, and develop knowledge in the arts, humanities, sciences, and social sciences, withdisciplinary specialization and the ability to integrate information across disciplines.

3. Think and create. Use multiple thinking strategies to examine real-world

issues, explore creative avenues of expression, solve problems, and make consequential decisions

4.Communicate. Acquire, articulate, create and convey intended meaning using erbal and non-verbal method of communication that demonstrates respect and understanding in a complex society.

			Duration of ESE	•
Course O	utcome:-			
CO1: Apply m	odern separation	techniques in various applications.		
CO2: To desig	gn a process based	l on separation principles.		
CO3: Appropri	iate application of	f separation steps in industrial processes.		
CO4: To comp	oute the kinetics of	of various types of separation processes.		

CO5: Analyze and design pervaporation, chromatography and dialysis based separation processes.

CO6: Analyze and design novel membranes for intended application.

	Course Contents	Hours
Unit 1	<b>General</b> Review of Conventional process, recent advances in separation technique based on size, surface properties ionic properties and other special characteristics of substance.	(04)
Unit 2	<b>Filtration</b> Process Concept, Theory and Equipment used in Cross flow filtration, Cross flow electro filtration, duel functional filtration surface based solid- liquid separation involving stead liquid, Siroflocfilter.	(04)
Unit 3	<b>Membrane filtration</b> Types and choice of membranes, Plates and frame, tubular, Spherial wounded and hollow fibre membrane, reactor and their relative merits , commercial, pilot plant, and labortary membranes, Permeates involving analysis, reverse osmosis, nano filtration, ultrafiltration, microfiltration and donan analysis, economics of membrane operation, cevanic membrane.	(05)
Unit 4	<b>Separation by Adsorption technique</b> Mechanism, Choice and type of adsorbent, normal adsorption technique, affinity chromatography, and immune chromatography, types of equipment and commercial processes, recent advance and processes, Economics.	(05)
Unit 5	<b>Ionic Separation:</b> Controlling factor, application, type of equipment used in electrophoresis, dielectrophoresis, ion exchange chromatography, and electro-dialysis, commercial processes.	(05)

Unit	6 Other technique: Separation Involving lyophilisation, pervaporation and permeation technique for solid, liquid, and gases, industrial variables and examples, zone melting, add crystallization, other separation processes, supercritical fluid extraction, oil spillage management.	(05)

Teaching Scheme		Examination Sche	me
Lectures	03 Hrs/Week	ISE	40 Marks
Tutorials		ESE	60 Marks
Total Credits	03	TW	
		Duration of ESE	•

Course Objectives : -
1 To study concept of Project Management and skills
2 Ability to understand organization structure
3 To acquaint with staffing the project office and team
4 Ability to understand controlling parameters and human behaviour
5 To study and develop a project scope
6 Ability to use CPM and PERT methods

	Course Contents	Hours
Unit 1	<b>Project Management growth</b> Concept and Definition, General System Management, Project management, Resistance to Change, System programmed, Project product vs project management a definition focus of success,Face of failure,Project life cycle,Project management methodologies,Corporate culture	(05)

Unit 2	<b>Organizational structure</b> Introduction, organizational work flow, Traditional organization, Developing work, integration position, Project coordinator, Projected organization, Matrix structure, Strong weak balanced matrix, Project management Expertise, Studying tips for the PMF (Project Management CertificateExam)	(05)
Unit 3	<b>Organizing and staffing the project office and team</b> The staffing environment, Selecting the project manager,Skill requirement for project and programme manager, Organizational staffing progress,The project office, Project organizational chart.	(05)
Unit 4	<b>management function</b> Controlling, Directing ,Project Authority, Interpersonal life cycle, leadership in a project management environment, life cycle leadership, organizational impact ,employee manager problem, management pitfalls, Communication, Human behavior education, Management policies andprocedure.	(05)
Unit 5	<b>Special Topic</b> Performance measurement, Financial compensation and rewards, Critical Issues with rewarding project team, mega Project, Morality, Ethics and corporate culture, Professional Responsibility, Internal Prternership, External Prternership, Training and education, Integrated project team, Virtual project team,Break through	(05)

Course Outcomes (CO): At the end of course students will
1. Define various operations like distillation, extraction, leaching, Compare and classify various mass transfer operations with or without chemical reaction
2. Design calculation of distillation column for the multi-component system
3. Analyze the problem of Separation by adsorption and design of absorber, chromatographic separation
4. Evaluate the separation by liquid extraction, leaching used and justify the extract operation to choose for specific problem
5. Estimate final data for designing number of stages, Height of column in the operations
6. Define various operations like distillation, extraction, leaching
